

EDUCATION

Envisioning engaging, next generation educational models, we have produced inherent flexibility and unprecedented innovation on \$2.5 billion worth of facilities

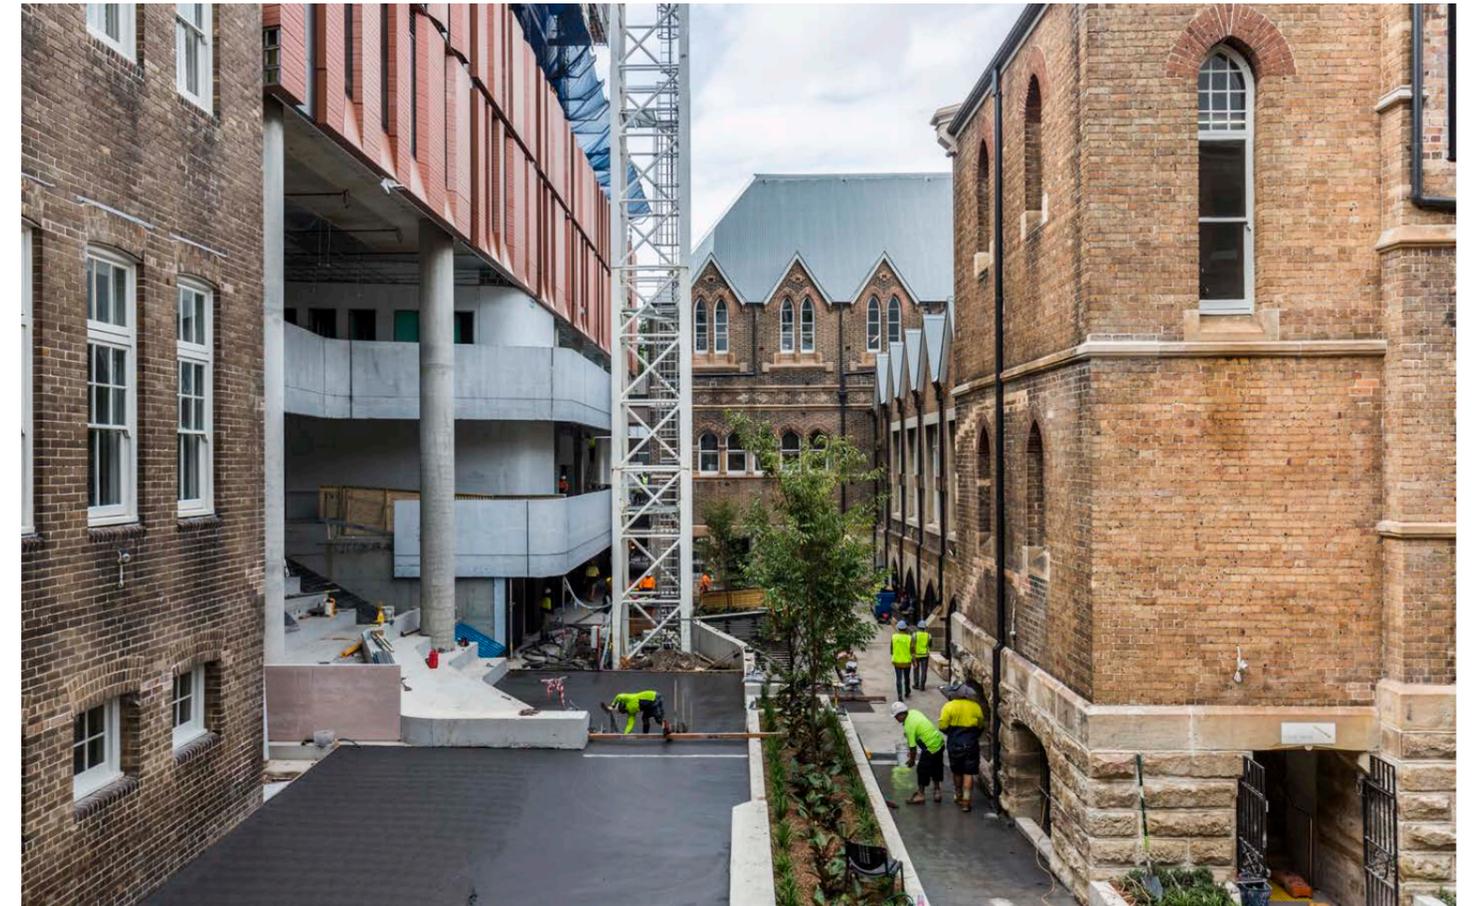

Education Projects

1. **Australian Catholic University Car Park Development, NSW**
2. **Belmont High School, NSW**
3. **Greater Shepparton Secondary College, VIC**
4. **Hedberg, TAS**
5. **Inner Sydney High School, NSW**
6. **Meadowbank TAFE Building ECI & Early Works, NSW**
7. **New Primary School in Estella, Wagga Wagga, NSW**
8. **Nulkaba Public School, NSW**
9. **University of Newcastle, Honeysuckle Campus Stage 1a, NSW**
10. **UQ Andrew Liveris Building, QLD**
11. **UQ Student Services Hub, QLD**
12. **USC Moreton Bay Foundation Building, QLD**
13. **Western Sydney & Wollongong Schools Package, NSW**

Inner Sydney High School

A perfect example of old meets new, the project blends refurbished heritage structures with state of the art vertical teaching spaces. This new school, situated in the centre of Sydney, will provide flexible and accessible education facilities for students. Careful planning and innovative thinking have underpinned this project, using BIM technology to map base building elements, manage complex services installations and ensure protection of nearby trees. Prioritising safety throughout this complex project, a fire safety strategy was developed from the outset in response to the close proximity of construction works and heritage structures. The project team has managed the live environment with carefully considered staging and crane-fitted interlock systems to prevent lifting over operational school buildings. To accommodate a seamless handover, a temporary generator provided power throughout commissioning of the heritage structures. Standing tall among the inner Sydney suburbs, the Inner Sydney High School is a worthy addition to Sydney's city skyline.

Hedberg

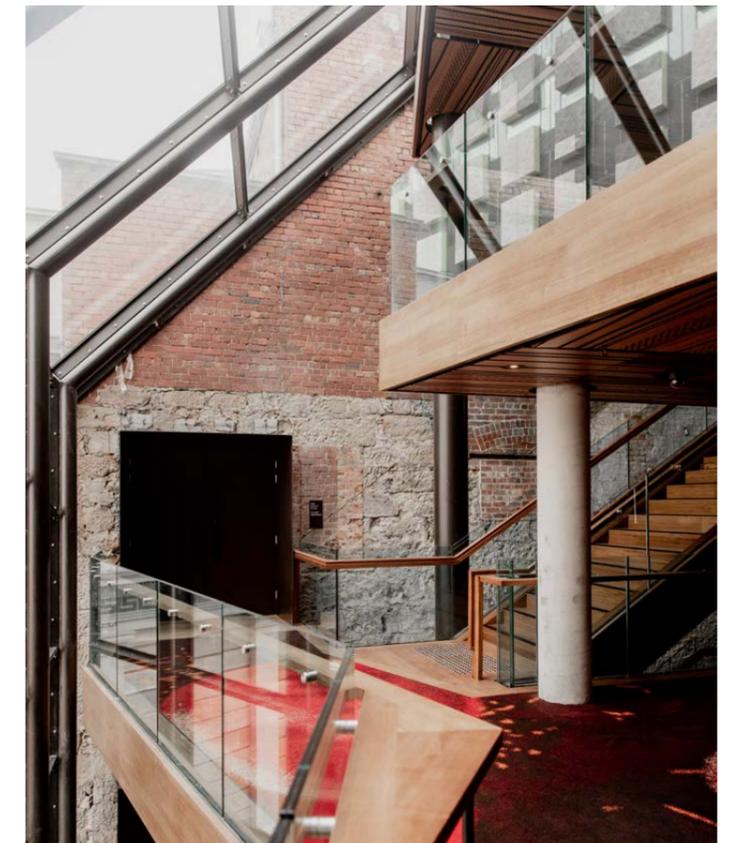

The UTAS Hedberg building is the ultimate performing and creative arts destination. Co-located with the oldest operating theatre in Australia, the Theatre Royal, this fine duo boosts Tasmania's cultural sector by enabling creative interdisciplinary education and research with a thriving music and performance hub.

Appropriately dramatic, the exterior shimmers in the sunshine with its crinkled 'curtains' denoting the opening of a performance. Its bold and beautiful design complements its heritage characteristics, following the delicate restoration of the Hedberg Garage. Original bricks and oregon and cedar timber recovered from the demolition of the garage were recycled and used to maximum effect. The timber features in the salon acoustic wall

linings and in façade heritage interpretation details, and the recycled bricks were inlaid into the concrete foyer floors and used as crushed, decorative gravel in landscaped areas.

Connecting to the 180 year old Theatre Royal, the highest quality box-in-box acoustic detailing creates the perfect barrier between performance, practice and public circulation spaces. The use of cross laminated timber in-lieu of multi-layer plasterboard in the recital hall, studio theatre and salon is an Australian first for a project of this scale.

Marking the end of an exciting construction journey, the Hedberg will soon become a name at the heart of Hobart's growing role as a city of national artistic and cultural standing.

Hedberg

Western Sydney & Wollongong Schools

Comprising different sites with each school remaining operational while the works take place, careful planning and scheduling to minimise noisy works is essential. Delivering 84 new flexible teaching spaces will benefit students and teachers for years to come.

1. **Canley Vale** High School, NSW
2. **Cecil Hills** Public School, NSW
3. **Gwynneville** Public School, NSW
4. **Marsden Road** Public School, NSW
5. **Quakers Hill East** Public School, NSW
6. **Riverstone** High School, NSW
7. **Wollongong** Public School, NSW

USC Moreton Bay Foundation Building

PLAY VIDEO

Prioritising people, places and their environment, Hansen Yuncken has delivered a world class facility designed for the next generation of digital natives. USC Moreton Bay Foundation Building creates a unique experience for its students using cutting edge, immersive information and audio visual technology with extensive hands on learning spaces that can be repurposed for nursing, science and engineering students. Adaptability and flexibility inherent in its design, the impressive 3-storey, multi purpose development includes an impressive 600 capacity internal atrium with an open auditorium suitable for community events and study hubs. Hansen Yuncken delivered an ambitious program that relied on meticulous materials handling and significant prototyping and testing of the exterior façade, to facilitate up to 50 different courses. With a looming deadline for first semester of this year, the team surpassed all expectations, achieving practical completion almost two weeks ahead of schedule.

Greater Shepparton Secondary College

The Greater Shepparton Secondary College is set to be a big school built with tremendous community spirit and heart. Delivering unprecedented educational opportunities for students in the Greater Shepparton Region, this leading edge facility will be the largest in the area, built for the Victorian School Building Authority.

Driving progressive change for innovative learning spaces capable of housing up to 2,700 students, the contemporary design replaces traditional classrooms with a new 'school within a school' model. This is achieved through a series of smaller school buildings, conceived as house-like pods to form three intimate 'Neighbourhoods'.

Steadily advancing, each Neighbourhood features three houses, providing smaller, more inclusive and flexible settings for students. The new addition, an Enterprise and Innovation Centre, will provide specialist teaching and learning areas for science, music, arts, drama, robotics and material technology. Not to be forgotten, the original schoolhouse will be reimagined for health and wellbeing services. Fast tracked to welcome students in 2022, this rapid build will raise the bar in revolutionising the delivery of secondary education.
